

ASLAMJON IBRAGIMOV

Frontend Engineer

SUMMARY

Frontend / Full Stack Engineer with 5+ years building React and TypeScript products — Electron.js desktop apps, an ERP/LMS platform used by 130,000+ people, and a POS SaaS serving paying retail customers. Grew from developer to frontend team lead; ships end-to-end features across frontend, backend, and production infrastructure.

EXPERIENCE

Frontend Engineer — ISM International Group, Dubai, UAE (remote)
JAN 2025 – MAY 2026

- Built the superadmin and admin panels (React, TypeScript, MUI) for an ELD compliance SaaS serving US trucking companies
- Built a framework-agnostic SVG rendering engine (TypeScript) for the hours-of-service log chart after evaluating Recharts and Chart.js — timezone-accurate time-to-coordinate mapping, connected multi-status segments, and per-segment hover with dual-edge tooltips and live duty-hour totals
- Engine was adopted by the Flutter mobile team through a WebView after a native implementation proved impractical — still running in production; the chart is on the main screen every driver and dispatcher uses daily
- Developed fleet-monitoring dashboards visualizing routes and vehicle speed streamed from in-truck iOS/iX devices, plus an interactive vehicle-maintenance scheduler and in-app chat
- Integrated a Gemini-powered AI assistant that helps dispatchers interpret truck and ELD error codes, explaining root causes and suggested fixes

CTO & Software Engineer — Xaridor
FEB 2024 – FEB 2026

- Led development of a point-of-sale SaaS for small grocery and retail businesses that reached 8+ paying customers — built the product independently, from frontend through backend and infrastructure
- Engineered an offline-first desktop application (Electron.js + React) processing 19,000+ sales transactions per month (~600/day) across customer stores — checkout kept running during internet outages and synced automatically on reconnection
- Designed a UI simple enough for non-technical shop owners — modern, minimal, and fast in daily checkout use
- Built and operated the NestJS/PostgreSQL backend managing a 30,000+ product catalog, plus self-managed production infrastructure

Frontend Engineer → Team Lead — PDP Academy / PDP University
DEC 2021 – AUG 2024

- Led frontend for a multi-company ERP/LMS platform used by 130,000+ people across 17 modules, growing from developer to team lead of 5 engineers
- Designed the config-driven “generic view” layer the platform is assembled from — pages defined by a backend endpoint plus view configuration, with shareable saved templates for column sets, ordering and filters; now powering 100+ pages across five companies
- Built its core data grid (row virtualization, inline editing, drag-and-drop and pinnable columns, runtime column creation synced to the backend, composable filters, inline media), the browser-style tab shell, and the permission layer driving 38+ roles down to individual pages and actions

linkedin.com/in/aslamjon-ibragimov

SKILLS

Frontend

React, Redux, TypeScript, MUI, Ant Design, Responsive Web Design

Desktop

Electron.js (offline-first architecture)

AI & Integrations

Google Gemini API, Telegram Bot API, payment integrations

Full Stack

Node.js, NestJS, Express, Prisma, PostgreSQL, MongoDB

DevOps

Linux (Ubuntu), nginx, VPS administration, Contabo

PROJECTS

metalmart.uz

metal-products marketplace
Built the backend and admin panel for catalog and order management

EDUCATION

MERN Full Stack Development

PDP Academy, Tashkent

NOV 2020 – NOV 2021

IT Professional College

JUN 2019
